## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Benchetrit (US 6,916,326). Benchetrit discloses a method for implanting surgical device (fig. 1), said method comprising: a. providing a surgical device comprising an elongated flexible inflatable portion (2), an elongated flexible and substantially inextensible band portion (1, inherently inextensible to the point that it must retain 2 while in use) having a distal end, a proximal end and a longitudinal axis therebetween, said band portion being attached to said inflatable portion (form in a single piece, col 6) along an inner face thereof, said band portion having a concave cross section (as seen at the edges thereof in the fig. 1 embodiment, conforms to the 2 profile), taken perpendicular to said longitudinal axis; and b. deforming said band so that it has a substantially flat (read as flatter than original) cross section

Art Unit: 3738

(fully capable and inherent in the fig. 1 embodiment since the additional thickness of 1 on 2 would resist expansion when 2 inflates, there by flattening 1 as 2 bulges) , taken perpendicular to said longitudinal axis, by encircling said band around body tissue (and inflating).

With regard to claims 2-5 and 7-9, as disclosed in use of the Benchetrit device and seen in the figures.

With regard to claim 6, the means for attaching said distal and proximal ends of said band together is 16 and its related parts.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Egle (US PGpub 2004/0260319), DiForte (US 5,382,184), Thompson et al. (US 6,634,533), Miller (US 5,509,888), Scorvo (US PGpub 2004/0242956) and Jakobsson et al. (US 6,102,922).
